Transformers

Dry Type Distribution 600 Volt Class^①

General

Siemens dry type distribution transformers are rated 600 volt class and are available in a wide variety of ratings to provide versatile electrical distribution for general purpose, lighting and power loads in commercial and industrial applications.

Ratings are available from 0.25 through 167 kVA single phase, and 3 through 1000 kVA 3-phase. A variety of primary and secondary voltage ratings are available to match the load requirements to the distribution system. All units meet applicable ANSI and NEMA standards. Standard designs are UL Listed. Transformers are designed, manufactured, and tested in accordance with ANSI, NEMA and IEEE Standards and are UL Listed. All units are fungus resistant. Fungus proof is not an option.

Encapsulated Transformer

Ventilated Transformer

Encapsulated

- The self-cooled kVA rating shall be suitable for 30°C average, 40°C maximum ambient temperature.
- Ratings from 0.25 kVA through 25 kVA, 1-phase, and from 3 kVA through 15 kVA 3-phase are available.
- Feature indoor/outdoor enclosures with integral wall mounting brackets, and either a 135°C rise, 180°C insulation system or a 95°C rise, 130°C insulation system.

Ventilated

- Ratings from 15 kVA through 167 kVA 1-phase, and from 15 kVA through 1000 kVA 3-phase are available.
- Indoor NEMA 1/3R enclosures with 150oC rise and 220oC insulation systems are standard. Many options are available.⓪
- Most three phase designs (15 kVA through 75kVA) and single phase designs (15 kVA through 50kVA)

- include primary and secondary terminal lugs. For more information, refer to lug table on page 8-8. Call customer support for confirmation if needed.
- 1-phase up to 167 kVA and 3-phase up to 750kVA are Seismic certified for floor mounting. Call customer support for larger kVA certification or wall mounting applications.

DOE 2016 Efficiency Standards

- Department of Energy (DOE) 10 CFR 431 released efficiency standards which will take effect January 1, 2016.
- New efficiency standards apply to dry-type three-phase ventilated transformers, including Harmonic Mitigating Transformers from 15 kVA to 1000kVA
- New standards will surpass and supersede NEMA TP1 standards and will make NEMA Premium obsolete.
- DOE 2016 designs have grain-oriented, non-aging silicon steel.
- Dry type, three phase ventilated transformers must be manufactured to DOE 2016 standards after January 1, 2016
- NEMA TP1 rated transformers will still be available for single phase transformers after January 1, 2016
- See accompanying chart for efficiency increases for DOE 2016 standards.

Comparison of 3-Phase LV Transformer Efficiency

kVA	TP1	NEMA Premium ^①	DOE 2016
15	97.00%	97.90%	97.89%
30	97.50%	98.25%	98.23%
45	97.70%	98.39%	98.40%
75	98.00%	98.60%	98.60%
112.5	98.20%	98.74%	98.74%
150	98.30%	98.81%	98.83%
225	98.50%	98.95%	98.94%
300	98.60%	99.02%	99.02%
500	98.70%	99.09%	99.14%
750	98.80%	99.16%	99.23%
1000	98.90%	99.23%	99.28%

⓪NEMA Premium will no longer be available after January 1, 2016 due to DOE 2016 requirements.

Distribution Dry Type Transformers

600 Volts Class — Single and Three Phase

Selection

600 Volts Class

Single Phase 0.25-167 kVA

Three Phase 3-1000 kVA

Features

- Standard units are UL listed and are designed in accordance with ANSI, NEMA (ST20) and IEEE standards

Encapsulated

- UL listed designs (UL 506)
- Totally enclosed, non-ventilated, heavy gauge steel enclosure
- Core and coil completely embedded within a resin compound for quiet, low temperature operation
- Encapsulation seals out moisture and air
- UL listed indoor/outdoor enclosure features integral wall mounting brackets
- Rugged design resists weather, dust, and corrosion
- Efficient, compact, lightweight, easy to install
- Flexible wiring leads that terminate within the bottom wiring compartment
- Large wiring compartment on the bottom with convenient knockouts
- High quality non-aging electrical grade core steel
- Precision wound coils

Ventilated

- UL listed designs (UL 1561)
- Designed for indoor NEMA 2 installations. NEMA 3R enclosures suitable for outdoor locations available as an option
- All D16 catalog numbers include NEMA 3R enclosures as standard unless other options chosen change or remove the enclosure
- Core and coils are designed with UL listed high-temperature materials rated for 220°C; standard units feature 150°C winding temperature rise
- Optional low temperature rise of 115° C or 80° C winding temperature rise for increased efficiency and additional overload capability
- Rugged sheet steel enclosure per UL1561, UL506 standards with removable panels for access to the internal wiring area
- Neoprene noise dampening pads isolate the core and coil from the enclosure
- Optional drip shields/weathershield and wall brackets available
- High quality grain-oriented, non-aging silicon steel core for 3 Phase units

Transformers

Dry Type Distribution 600 Volt Class^①

Specifications

Standard Construction Features

Transformers rated 15 kVA and larger shall be a ventilated dry type with a UL Listed 220°C insulation system. Units shall be designed to operate with a rated maximum temperature rise of 150°C (Optional 115°C or 80°C rise can be specified).

Construction shall consist of aluminum windings and arranged to brace coil layers and provide maximum ventilation. (Optional copper windings can be specified). 3-Phase cores shall be constructed of grain-oriented, non-aging silicon steel with high magnetic permeability and low loss characteristics.

Core laminations shall be tightly assembled. The complete core and coil assembly shall be impregnated with non-hydroscopic thermo-setting varnish to provide a high dielectric, moisture resistant, flame retardant seal that is inherently fungus-resistant.

Core and coil assemblies shall be constructed to provide short circuit withstand capability as defined by ANSI and NEMA standards. The complete assembly shall be installed on vibration dampening pads to reduce noise and will be securely bolted to the enclosure base. A flexible grounding conductor shall be installed between the core and coil assembly and the transformer enclosure.

Enclosures shall be ventilated, heavy gauge steel construction finished with light gray paint. Front and rear covers shall be removable to provide access to the terminal compartment. Terminals shall be fully sized to carry the transformer full load current and shall be arranged to accept required UL-Listed cable connectors. Units installed outdoors shall have a UL-Listed type 3R outdoor enclosure, or shall be UL Listed with optional weathershields installed. Standard voltage ratings shall be supplied with NEMA standard taps for the high-voltage windings. Unless specified otherwise, average sound levels (150°C rise) shall meet the NEMA ST20 standards.

Each transformer shall have a securely attached nameplate providing complete electrical ratings, wiring diagram, tap connections, and catalog number, as applicable.

K-Factor Rated for Non-Linear Loads

Siemens offers transformer designs which meet K-Factor ratings. K-Factor is a ratio between the additional losses due to harmonics and the eddy losses at 60Hz. It is used to specify transformers for non-linear loads. Note that K-Factor transformers do not eliminate harmonic distortion; they withstand the non-linear load condition without overheating.

K-Factor Features

- Designed to ANSI and NEMA Standards
- UL K-Factor Listed per UL 1561
- K-Factor Rating Designed to IEEE c57.110
- Aluminum Wound Coils
- Core, Conductors designed for Harmonics and Eddy Currents 150°C
- Rise, 220°C Insulation
- Electrostatic Shield to Attenuate Line Transients
- 200% Neutral Bar (2X Phase current)
- NEMA 3R Enclosure standard for D16 catalog numbers

Transformers shall be designed, manufactured, and tested in accordance with ANSI, NEMA and IEEE Standards and shall be UL Listed. The self-cooled kVA rating shall be suitable for 30°C average, 40°C maximum ambient temperature. Non-Linear rated transformers shall be suitable for nonsinusoidal loads and harmonic distortion as indicated in IEEE C57.110, and shall be designed with the following K-Factor rating (choose one):

- K4 for 50% Non-Linear load
- K13 for 100% Non-Linear load
- K20 for 150% Non-Linear load
- K30 for 200% Non-Linear load

Non-Linear rated transformers shall be UL Listed and shall bear the UL marking on the nameplate along with the specified K-Factor rating. Non-Linear rated transformers shall include the following design features:

- a) Core designed to withstand voltage distortion and high frequency harmonic currents. Magnetic flux density designed to reduce eddy currents and prevent saturation or overheating of the core
- b) Primary and secondary coils designed to minimize stray losses, skin effect losses, and excessive heating from harmonic currents. Coils shall not exceed the specified winding temperature rise, the corresponding hot spot temperature rating, or the 220°C insulation rating while carrying the specified Non-Linear load.
- c) Neutral bus sized for 200% of rated current to withstand circulating currents and triplen harmonics.
- d) An Electrostatic Shield between the primary and secondary winding and grounded to a common point within the transformer enclosure. When properly grounded, the shield shall provide noise isolation and attenuate common mode and transverse mode noise transients under normal loading conditions.
- e) The design and materials used shall enable the transformers to comply with NEMA TP1 efficiency standards.

Options

- Special K-Factor ratings
- Special voltage ratings
- NEMA 3R provided for Series J Single-Phase with Drip Shield (DS)
- 80° or 115°C temperature rise
- Low noise designs
- Copper windings
- Drip Shields (when not provided as standard – see chart on page 8-8)
- Wall mounting brackets (15–75 kVA) (standard in most cases)
- NEMA Premium[®] Efficiencies available only until January 1st, 2016 on 3-Phase but will continue to be available on Single-Phase

^①Temp rise and insulation system values shown are typical. Variation in these values may exist depending on size, design and series, but all will comply with the requirements of UL506 and UL1561.

Distribution Dry Type Transformers

Overview of Transformer Offerings

Selection

Sentron Power Centers

Harmonic Mitigating Transformers

Buck-Boost Transformers

Single Phase Transformers

Siemens offers single phase transformers from 0.25 kVA to 167 kVA with aluminum windings. Common optional modifiers include Low Temperature Rise, Electrostatic Shield, Copper Windings, Wall Mounting Brackets and Drip Shields. See Page 8-10 for common single-phase transformer offerings.

Three Phase Transformers

Siemens offers three phase transformers from 3 kVA through 1000kVA with aluminum windings. Common optional modifiers include K factor, Low Temperature Rise, Electrostatic Shield, Copper Windings, Low Noise, Wall Mounting Brackets, and Drip Shields. All three phase dry-type ventilated transformers will be manufactured to DOE 2016 efficiency standards after January 1, 2016. See page 8-12 for common three-phase transformer offerings.

Motor Drive Isolation Transformers

Siemens Drive Isolation Transformers are designed to meet the rugged demands of AC and DC variable speed drives and to provide circuit isolation from SCR's. The separate primary and secondary windings provide isolation between the incoming line and the load, minimizing line disturbances, feedback and transients caused by SCR firing. Common optional modifiers include low temperature rise, electrostatic shields, copper windings, thermal switches, wall mounting brackets and drip shields. See page 8-15 for more details.

Sentron Power Centers

Siemens Sentron Power Center is a pre-wired combination of a primary breaker disconnect, dry type shielded transformer, secondary breaker disconnect and a secondary power panel all in one convenient package. You save time, space and money by not having to individually assemble, mount and wire these components. Simply add the branch breakers and you're ready to go. Both plug-on and bolt-on breaker panels are available. All Sentron Power Centers are UL-3R listed for indoor and outdoor use. See page 8-17 for more details.

Harmonic Mitigating Transformers

The Sentron Harmonic Mitigating Transformers (HMTs) are designed to meet the needs of modern power distribution systems that contain a large percentage of non-linear equipment that produces harmonics. The Sentron HMTs are specially designed to operate under high non-linear load conditions and have the additional benefit of improving the overall power system reliability. Siemens Sentron Harmonic Mitigating Transformers are only available in three-phase with either one or two secondaries (outputs). See page 8-20 for more details. DOE 2016 efficiency standards apply after January 1, 2016.

Buck-Boost Transformers

The Buck-Boost Transformer has four separate windings; two windings in the primary and two windings in the secondary. It can be used as either an insulating transformer or autotransformer. As an autotransformer, the unit can be corrected to Buck (decrease) or Boost (increase) a supply voltage. Since autotransformers may transmit line disturbances directly, they may be prohibited in some areas by local building codes. As insulating transformers, these units can accommodate a high voltage of 120, 240, or 480 volts. For units with two 12 volt secondaries, two 16 volt secondaries, or two 24 volt secondaries, the output can be wired for either secondary voltage, or for 3-wire secondary. The unit is rated (kVA) as any conventional unit. See Page 8-23 for more details.

Optional Modifiers		
Modifier	Suffix	Description
K-Factor	K4	K-Factor of 1 is standard for all and is not shown as part of part number. Addition of K-Factor options 4-through 30 include Electrostatic Shield (ES) option and 200% neutral
	K13	
	K20	
	K30	
Low Temperature Rise	150C temperature rise with 220 insulation class is standard, no suffix code is needed	
	B	B=80C (80° C temp rise, can tolerate 30% continuous overload) ^②
	F	F=115C (115° C temp rise, can tolerate 15% continuous overload) ^②
Electrostatic Shield	G	G=130C
	ES	Electrostatic shield (full width copper foil) for added noise attenuation and reduction of high frequency disturbances.
Copper Wound	ES2	ES2=dual (only applicable to HD1). Series H only.
	C	C=Copper Windings. Aluminum windings are standard, no suffix code needed.
Low Noise	LN3	LN3=3dB below NEMA ST20
	LN5	LN5=5dB below NEMA ST20
	LN()	()=dB below NEMA ST20. Contact sales office for levels other than LN3 & LN5.
Seismic rated	Z4	See chart on page 8-8 for available seismic ratings, not part of catalog number when standard. Not used after DOE 2016 is introduced. Shown for legacy products only.
Totally Enclosed (Non-Ventilated)	TE	TE for Series H is NEMA 4 as a standard. TE for Series J is NEMA 3R as a standard. Other NEMA types available. TE option not available with D16 and TP1.
Totally Enclosed Encapsulated	TEE	Same as TE except encapsulated. TEE not available with D16 and TP1.
Energy Efficient ^③	D16	D16=DOE 2016 standards. DOE 2016 standards will replace TP1 For 3 Phase Ventilated Dry Type Transformers for 15 kVA-1000kVA starting Jan. 1, 2016
	TP1	Still valid for single phase and all non ventilated transformers after Jan. 1, 2016
Frequency	LZ	Standard is 60 Hertz. LZ option is 50/60 Hz. Not available with TP1 and D16.

Note 1: If the catalog number will not completely describe the product, it will be identified as SPC-- -kVA-XFMR.
 Note 2: "JST" suffix has been removed. Standard units are in stock for immediate shipment in many cases. Contact customer support.

② With continuous overloads these units will be operating at 150 C rise designs.
 ③ All D16 catalog numbers include NEMA 3R enclosures as standard unless other options chosen change or remove the enclosure.

Distribution Dry Type Transformers

Optional Modifiers (continued)

Modifier	Suffix	Description
Harmonic Mitigation		HD1 for DOE 2016 standard 3 phase dry type ventilated transformers only. Series H only.
	HD1	HD1=1 secondary/single output
"NEMA Premium"	NP	Surpasses NEMA-TP1 (Combine NP with available combined options as shown: "TP1...NP", "HM1...NP", "HM2...NP"). DOE 2016 standards surpass NP. NP not available after January 1, 2016 for DOE 2016 3 phase ventilated dry type transformers (15kVA-1000kVA). NP 1-phase will continue to be available after this date.
		Only to be used with suffix code HD1
Phase Shift for HD1	0	0 degree lagging
	30	30 degree lagging

Optional Product Offerings

1. For non-standard or non-cataloged voltages or non-cataloged primary taps refer to sales office.
2. Non-standard application, 50/60 Hz, special impedance, voltage, etc.- consult sales office.
3. Auto transformers (A)- see page 8-11.
4. Non-standard paint color-contact sales office.
5. Harmonic mitigating transformers-see page 8-15.
6. Transformer and panel combinations- see page 8-13 & 8-14.

Optional Modifiers—continued (If applicable, add suffix to part number in this order, from left to right)

Optional Modifiers (continued)

Modifier	Suffix	Description
Thermal Switches		Typical Thermal Switch is 2.5 A and 250V max, typical installation is one TS per coil with wires brought to a modular screw terminal block on top of the transformer. Customer must specify NO or NC contacts. Contact customer support for special requirements.
	TS7 ()	170C () = no value: 1 switch
	TS8 ()	180C () = 2: 2 switches
	TS0 ()	200C () = 6: 6 switches
TVSS/SPD	TV	Filter Capacitors Secondary Side with Surge Suppression. Available for Series H only. Must specify 100kA or 200kA surge rating.
Terminal Block	TB	Contact customer support for standard terminal block availability. If special terminating requirements please advise
Stainless Steel Enclosure	SS	304 stainless (NEMA 3R if no NEMA type qualifier is specified)
	SS316	316 stainless (NEMA 3R if no NEMA type qualifier is specified)
Enclosure Types		304 stainless is standard. Stainless steel 316 available with a special quote.
	SSN4X	Non-Metallic NEMA 4X option not available.⑤
	N12	NEMA 12 (SSN12 with 304 stainless) 316 available with special quote⑤
	N4	NEMA 4 (SSN4 with 304 stainless) 316 available with special quote⑤
Special Impedance		The impedance tolerance per ANSI is +/- 7.5% nominal which is the "I" value shown on Impedance charts. (see SpeedFax Supplement - Addendums H and J) Contact customer support for special requirements (if max or min or min/max range is required.) (If no Min or Max is specified - catalog number will NOT include an "I" value)
	Ix.x or Ix	I2.5 = 2.5% max. or I3 = 3% max. for example. I2.5 to I6.5 are typical values.
	IMx.x	IM2.5 = 2.5% min. or IM3 = 3% min. for example.
	IMx.xIx.x	IM2.5I5.5 = 2.5% min. and 5.5% max. impedance range or IM2I15 = 2% min. and 5% max. range are examples.
Core and Coil Assembly	CC	Name plate is displayed on frame bracket. Product may be shipped with or without enclosure.
Wall Mounting Brackets	W④	Some DOE 2016 3 Phase Dry Type Ventiladed Transformers include Wall Brackets. See chart on next page for non-DOE availability and DOE 2016 details.
Vent Guard	VG	Vent Guard is a Mesh screen to prevent vent opening access.
Drip Shields (weathershields)	DS④	Most DOE 2016 Dry Type Ventiladed Transformers include Drip Shields from 15kVA to 1000kVA. See chart on next page for availability. Also see non-DOE availability.

④ The W and DS codes are not always part of the catalog number. Only shown as reference when it is not a standard feature of the device.
 ⑤ Not available with D16 or TP1.

DOE 2016 3 Phase Ventilated				
3	NA	1-1000kVA (Floor Mounted)	15-750kVA (Floor Mounted Only)	NA

① Seismic labels are standard up to 750kVA with 150C temperature rise.
 ② Series J Results are filed with OSHPD per OSP-0109-10.
 ③ Series H results are filed with OSHPD per OSP-0136-10.

Seismic Qualified according to:
 • International Building Code (IBC) 2012
 • American Society of Civil Engineers (ASCE) 7-10

- Standard with DH1 and DH2 enclosures. For DH3 enclosure, Series H transformers 1000 lbs or less can be wall mounted with kit p/n TWB75H. The DH3 designation is found on the lower left corner of the Front View Outline on the transformer drawing.
- Optional except with copper windings or options B, K13, K20. See table page 8-27.

* Included at no extra charge when ordered with transformer. Contact customer support to special order separately. Transformer catalog number with "XD" suffix added.
 **For DOE 2016, cost of transformer will not include wall brackets. Wall brackets will be an additional charge.

① Actual taps may vary based on volts/turn ratio.
 ② Wall designations for units having standard features.
 ③ Ventilated transformers drip shields are UL listed for outdoor use.
 ④ Encapsulated transformers are UL listed for indoor/outdoor use (2.5% on each side of lighting tap).
 ⑤ Reduced capacity 1-phase tap—When utilizing 1-phase tap at 5%, the 3-phase load is reduced to 85% max. (5%

reduction on 3 coils). 10% of rated kVA absolute maximum (evenly balanced on each side of lighting tap).
 When utilizing 1-phase tap at 10%, the 3-phase load is reduced to 70% max. (10% reduction on 3 coils).
 ⑥ See table on page 8-8 for available kits.
 ⑦ 240 volt secondary (3F2) is available in 3-phase 3 to 15kVA only.

⑧ TE units will have inrush equal to 2 sizes larger than rated kVA.
 ⑨ Items marked floor and wall can be wall mounted with optional wall bracket that may be identified with "W" suffix on catalog number.
 ⑩ Wall mounting for 150°C temperature rise.
 ⑪ Series H Tap Standard.
 ⑫ Series J Tap Standard.

① Actual taps may vary based on volts/turn ratio.

② Wall designations for units having standard features.

③ Ventilated transformers drip shields are UL listed for outdoor use.

④ Encapsulated transformers are UL listed for indoor/outdoor use.

⑤ If used on unbalanced loads, these auto transformers will need to be used on a 4-wire system with the supply neutral connected to the transformer. If used on motor loads, then they may be used on a 3-wire system without a neutral or fourth wire. Review in NEC 450-4 and 450-5.

⑥ Items marked floor and wall can be wall mounted with optional wall bracket that may be identified

with "W" suffix on catalog number. Wall mounting brackets will not be available for Series J 75kVA with copper winding options. See pages 8-8 and 8-27 for details.

⑦ Series H Tap Standard.

⑧ Series J Tap Standard.

⑨ See table on page 8-8 for available kits.

Distribution Dry Type Transformers

Motor Drive Isolation

For industrial and commercial applications with SCR-controlled adjustable speed motor drives, and AC adjustable frequency or DC drives.

Designed for use with motor drives, the drive isolation transformer must isolate the motor from the line and handle the added loads of the drive-created harmonics.

Drive isolation transformers are engineered for both AC adjustable frequency and DC motor drives.

They are specifically designed to accommodate the electrical and mechanical stresses, regenerative current reversals and frequent short circuits, inherent in severe drive duty cycles.

① Actual taps may vary based on volts/turn ratio.
 ② For outdoor application. Ventilated transformers requiring drip shields are UL listed for outdoor use. No charge when requested at time of initial project order.

③ Items marked floor and wall can be wall mounted with optional wall bracket identified with "W" suffix on catalog number. See pages 8-8 and 8-27 for details.

④ Refer selection and application guide for additional information on horsepower, Ampere, kVA ratings and applications. Standard taps varies with design volts/turn ratio.

Distribution Dry Type Transformers

Sentron Power Centers – Plug-In Series

Selection

Economical Space Saving Package

Siemens Sentron Power Center is a pre-wired combination of a primary breaker disconnect, dry type shielded transformer, secondary breaker disconnect and a secondary power panel all in one convenient package.

You save time, space and money by not having to individually assemble, mount and wire these components. Simply add the branch and you're ready to go.

UL-3R Enclosures

All Sentron Power Center enclosures are UL-3R listed for indoor and outdoor use.

Transformer Assembly

Siemens totally encapsulated distribution transformers are designed for general purpose indoor/outdoor operation.

Sentron Power Centers can be installed in a wide variety of atmospheric and environmental conditions. A 180°C, UL recognized insulation system is used with a 115°C temperature rise.

Sentron Power Center units are electrostatically shielded to provide transient voltage protection at no extra cost. All units have 2-5% FCBN taps.

Panel Assembly

The power panel assembly will accommodate one-inch, 1, 2 or 3-pole, common trip, duplex secondary branch circuit breakers, Type Q and QT as well as ground fault circuit breakers. Per UL and NEC requirements, the Sentron Power Center assembly comes fully equipped with primary and secondary main circuit breakers. Branch circuit breakers can be obtained from our local distributor once you have established your branch circuit requirements. All Sentron Power Centers are UL listed for service entrance.

* Not Seismic rated

① Primary breaker has lineside lug for customer connection.

② 18,000 Amps RMS Symmetrical Interrupting Capacity.

③ Sentron Power Centers are NEMA 3R for outdoor application and may be ordered with "SS" suffix for 304 stainless steel enclosure. For 316 stainless steel add suffix SS316.

④ Secondary branch breakers are not included and must be ordered separately.

⑤ Primary and secondary main breakers are included and are factory installed.

⑥ ED frame breakers furnished are rated 18000 AIC and are sufficient for fault current of transformer. No other breakers are currently approved for use.

⑦ Copper windings are standard on 1LPC005 and 3LPC009. Add CU to other partnumber to get copper windings.

⑧ CU and CUB interiors have tin plated copper bus. 1-Phase 5 thru 10kVA have aluminum bus. CUB refers to OEM interior versus CU un-assembled interior.

Distribution Dry Type Transformers

Sentron Power Centers – Bolt-on Series

Selection

Bolt-on Breaker Option

The same economical space saving package, NEMA 3R rated enclosure, and UL listed transformer of the original Sentron Power Center but now available with more robust BOLT-ON BREAKERS.

Panel Assembly

This version of the Sentron Power Center uses our UL Recognized P1 Lighting Panel interior with the following ratings & features:

- 200 kA Short Circuit rating
- 240 Volts maximum (when using type BL branch devices)
- 250 Amps maximum
- Copper bus
- 18 circuit panel for 15kVA and below
- 30 circuit panel for designs above 15kVA

The power panel assembly will accommodate one-inch, 1, 2, or 3-pole type BL, BLH, HBL branch Breakers, to include the BL family of AFCI, GFCI, Ground Fault, Switching Neutrals, HID Lighting, Tungsten Lighting, and Molded Case Switches.

The Sentron Power Center assembly comes fully equipped with transformer primary and secondary main circuit breakers. Branch circuit breakers can be obtained from our local distributor once you have established your branch circuit requirements. All Sentron Power Centers are UL listed for service entrance applications.

* Not Seismic rated

⑧ Excluding Secondary Main Breaker that takes up 2 poles.

⑨ Excluding Secondary Main Breaker that takes up 3 poles.

DOE 2016 Efficiency Standards

The Department of Energy (DOE) 10 CFR 431 has released new efficiency standards which will be put into effect January 1, 2016. These standards surpass and supersede NEMA TP1 efficiency standards. All low-voltage dry-type three-phase ventilated transformers from 15 kVA through 1000kVA must be manufactured to these standards after January 1, 2016. DOE 2016 standards also apply to Harmonic Mitigating Transformers (See pages 8-19 – 8-20).

Transformers manufactured to DOE 2016 efficiencies must meet efficiency levels with a 35% load and temperature of 75°C. Transformers with DOE 2016 standards have grain-oriented, non-aging silicon steel cores. DOE 2016 standards do not apply to single phase, encapsulated, motor drive isolation, and auto transformers.

High Efficiency Transformers

Single Phase		Three Phase	
kVA	TP1 Efficiency	kVA	DOE 2016 Efficiency
15	97.70%	15	97.89%
25	98.00%	30	98.23%
37.5	98.20%	45	98.40%
50	98.30%	75	98.60%
75	98.50%	112.5	98.74%
100	98.60%	150	98.83%
167	98.70%	225	98.94%
250	98.80%	300	99.02%
333	98.90%	500	99.14%
		750	99.23%
		1000	99.28%

NEMA TP1 Efficiency Standards

NEMA TP1 will still be a valid efficiency standard for single phase transformers after January 1, 2016. The TP1 designs use high grade electrical steel and other features to lower flux density and reduce losses especially at average 35% loading where the TP1 measurements apply. The core construction employs the use

of high quality grain-oriented, non-aging silicon steel with high permeability, low hysteresis, and low eddy current losses. These characteristics are required to achieve the TP1 efficiency levels. Core laminations must be tightly assembled enabling magnetic flux densities to be kept well below the saturation point.

Description

The Sentron Harmonic Mitigating Transformers (HMTs) are designed to meet the needs of modern power distribution systems that contain a large percentage of non-linear equipment that produces harmonics. Some examples of this type of equipment are computers, printers, fax machines, scanners, copiers, uninterruptible power supplies, ballast and variable frequency drives (VFD). This type of equipment generates harmonic voltages and currents because they contain AC to DC power conversion rectifiers. Harmonic voltages and currents can cause a variety of problems ranging from poor power factor, voltage distortion, capacitor resonance and motor failures to overloaded transformers and conductors.

The Sentron HMTs are specially designed to operate under high non-linear load conditions and have the additional benefit of improving the overall power system reliability.

Application

One of the most effective ways to eliminate power system harmonics is to use a technique known as "phase shifting." In this method power system harmonics are eliminated by pairing together harmonics that have 180° relative angular displacement, which causes them to cancel one another out. This can be accomplished by a variety of means:

Single Output Harmonic Mitigating Transformer (0° or -30° primary-secondary angular displacement)

■ The primary of this transformer has a delta connection and its secondary has a special double winding connection. Although there is only one secondary three phase output, the 3rd, 9th and 15th harmonic currents are prevented from circulating in the primary windings by canceling their magnetic fluxes at low impedance with the double winding secondary, reducing voltage distortions to the loads.

- When two transformers with this type of connection, 0° and -30° displacement, are used in parallel, the 3rd, 9th and 15th harmonic currents are canceled as previously described, and additionally the 5th and 7th harmonic currents are cancelled in the electrical supply common to both transformers due to their relative 30° phase shift.
- If a single harmonic mitigating transformer (0°) is used in an existing or new system utilizing standard delta-wye transformers (-30°), the 5th and 7th harmonic currents originating from the HMT transformer (0°) will attempt to cancel the 5th and 7th harmonic currents originating from the standard delta-wye transformer (-30°). This reduces the overall 5th and 7th harmonics present in the system, with the actual reduction dependent on the magnitudes of the secondary loads.

Benefits

Elimination of undesirable harmonics by using the Siemens Sentron HMTs is an effective solution to the power quality problems encountered by today's power system professionals. By treating the harmonics at their source, using advanced technology, installation problems can be avoided and overall system reliability improved. The Sentron HMT product line provides many far reaching benefits such as lower operating cost, improved operating efficiency, reduced down-time due to outages caused by nuisance tripping, and increased equipment life due to low-voltage distortions.

Design and Construction Features

The Sentron Harmonic Mitigating Transformers comply with all applicable ANSI/IEEE standards including C57.12.91, C57.96, C57.110, CSA # C22.2 No. 47 (CUL), UL506, UL1561 as well as NEMA ST-20. The design life is 25 years at 150 degree C rise, 30 years at 115C rise and 40 years for 80C rise models. Approvals and listings include UL, CSA. with CE approval available when requested. The Sentron HMTs have capability of K-factor up to K-13, which is achieved by harmonic cancellations in the secondary and low flux density design for protection against heat in place of design enlargement protection only. Both copper and aluminum coil windings are available and full width copper foil electrostatic shield is standard. Additional shield options are available for higher noise attenuation requirements. All HMTs have 150C rise with optional 130C, 115C and 80C winding rise designs available. All designs include vacuum impregnated polyester resin encapsulation of windings and NEMA 3R enclosures. A neutral sized at 200% of the ampacity of the secondary phase conductors for extra protection against triplens and unbalanced single phase loads. The Sentron HMT designs have DOE 2016 energy efficient rating equal to that of a non K-Factor rated transformer. Siemens HMT designs have DOE 2016 efficiency levels at 35% load @ ref temp. 75 degree C.

HMT, 480 Volt Primary 208Y/120 Volt Secondary (3F3)–150C
(standard), 115C and 80C Winding Rise displayed on this page.
HMTs are also available with 480–480Y/277 (3F5), 208–
208Y/120 (3B3), 208–480Y/277 (3B5).

Standard Features Include:

- K-13 Load profile rating.
- DOE 2016 Efficiencies at 35% load.
- (C) Copper windings or Aluminum windings (no suffix code).
- (ES) Electrostatic shield.
- 150 C Winding rise.

Changes after January 1, 2016: 2 output, 15 & 45 deg Lag & 130 deg C temp rise will no longer be standard. They can be provided with a special quote from MAP.

Selection

Buck-Boost Application Description and Selection

The Buck-Boost Transformer has four separate windings, two-windings in the primary and two-windings in the secondary. The unit is designed for use as an isolation (or insulating) transformer or as an autotransformer. As an autotransformer the unit can be connected to Buck (decrease) or Boost (increase) a supply voltage. When connected in either the Buck or Boost mode, the unit is no longer an isolation (or insulating) transformer but is an autotransformer. Units are designed for 60Hz applications (50Hz units available upon request).

Autotransformers are more economical and physically smaller than equivalent two-winding transformers and are designed to carry the same function as two-winding transformers, with the exception of isolating two circuits. Since autotransformers may transmit line disturbances directly, they may be prohibited in some areas by local building codes. Before applying them, care should be taken to assure that they are acceptable according to local code.

NOTE: Autotransformers are not used in closed delta connections as they introduce into the circuit a phase shift which makes them uneconomical.

As isolation (or insulating) transformers these units can accommodate a high voltage of 120, 240 or 480 volts. For units with two 12 volt secondaries, two 16 volt secondaries, or two 24 volt secondaries, the output can be wired for either secondary voltage, or for 3-wire secondary. The unit is rated (kVA) as any conventional transformer.

Operation

Electrical and electronic equipment is designed to operate on a standard supply voltage. When the supply voltage is constantly too high or too low, (usually greater than $\pm 5\%$), the equipment fails to operate at maximum efficiency. A Buck-Boost transformer is a simple and economical

means of correcting this off-standard voltage up to $\pm 20\%$. A Buck-Boost transformer will NOT, however, stabilize a fluctuating voltage. Buck-Boost transformers are suitable for use in a three phase autotransformer bank in either direction to supply 3-wire loads. They are also suitable for use in a three phase autotransformer bank which provides a neutral return for unbalanced current. They are NOT suitable for use in a three phase autotransformer bank to supply a 4-wire unbalanced load when the source is a 3-wire circuit.

Construction

Buck-Boost Transformers are contained within a NEMA 3R, non-ventilated weather-proof enclosure. Wiring compartments are located at the bottom. Core and coil assemblies are encapsulated. Isolation (or insulating) system temperature is 130°C and the winding temperature rise is 95°C for units up through 1 kVA. Isolation (or insulating) system temperature is 180°C and the winding temperature rise is 135°C for units 1.5 kVA and above.

How To Select The Proper Transformer

To select the proper Transformer for Buck-Boost applications, determine:

1. Input line voltage — The voltage that you want to buck (decrease) or boost (increase). This can be found by measuring the supply line voltage with a voltmeter.
2. Load voltage — The voltage at which your equipment is designed to operate. This is listed on the nameplate of the load equipment.
3. Load kVA or Load Amps — You do not need to know both — one or the other is sufficient for selection purposes. This information usually can be found on the nameplate of the equipment that you want to operate.

4. Number of phases — Single or three phase line and load should match because a transformer is not capable of converting single to three phase. It is however a common application to make a single phase transformer connection from a three phase supply by use of two legs of the three phase supply circuit. Care must always be taken not to overload the leg of the three phase supply. This is particularly true in a Buck-Boost application because the supply must provide for the load kVA, not just the nameplate rating of the Buck-Boost transformer.
5. Frequency — The supply line frequency must be the same as the frequency of the equipment to be operated — either 50 or 60 cycles.

How To Use Selection Charts

1. Choose the selection table with the correct number of phases for single or three phase applications.
2. Line/Load voltage combinations are listed across the top of the selection table. Select a line/load voltage combination which comes closest to matching your applications.
3. Follow the selected column down until you find either the kVA or load amps of your application. If you do not find the exact value, go on the next highest rating.
4. Now follow across the table to the far left-hand side to find the catalog number and the kVA of the transformer you need.
5. Follow the column of your line/load voltage to the bottom to find the connection diagram for this application.

NOTE: Connection diagrams show low-voltage and high-voltage connection terminals. Either can be input or output depending on Buck or Boost application.
6. In the case of three phase loads either two or three single phase transformers are required as indicated in the "quantity required" line at the bottom of the table. The selection is dependent on whether a Wye connected bank of three transformers with a neutral is required or whether an open Delta connected bank of two transformers for a Delta connected load will be suitable.
7. For line/load voltage not listed on the selection tables, use the pair listed on the table that is slightly above your application for reference. Then apply the first formula at the bottom of the table to determine "new" output voltage. The new kVA rating can be found using the second formula.

Buck-Boost Transformers

Single Phase, Three Phase

Typical Connection Diagrams

If you are using this unit as an **auto transformer** to buck (lower) or boost (raise) the voltage by a 12 to 48 volts use the information on pages 8-22 to 8-24 to select the proper wiring diagram.

Note: HV= Higher Voltage, LV= Lower Voltage when bucking and boosting.

If you are using this unit as an isolation transformer with a primary of 120 or 240 or 480 volts and the secondary of 12/24, 16/32, or 24/48 (depending on the model) use the wiring diagram located on the inside of the cover to the wiring compartment.

Low-voltage Applications:

By using the "Standard Step-down Application" diagram at left, buck boost transformers will convert 120V or 240V to 12, 24, 16 or 32 volts and 240V or 480V to 24 or 48 volts without affecting the nameplate kVA rating of the transformer. Buck boost transformers used in this type of application will become isolation or insulating type transformers.

Drip Shield/Weather Shield Kits for Ventilated Transformers^{①②}

Drip shields are integral to enclosure for Series H transformers and all DOE 2016 Series J transformers. Include DS option code to catalog number to include with single phase Series J transformers. Drip shield kits are available for field installation for Series J and other previously sold series transformers. Call factory for price and availability. See page 8-8 for additional information.

Wall Mounting Brackets for Ventilated Transformers

For Series H transformers, wall brackets are integral to the enclosure up to 30kVA and most 45kVA. A Wall Bracket Kit is available for 45kVA transformers that do not include wall brackets and for most 75kVA transformers. They should be ordered separately for field installation rather than including the W option in the catalog number. Series H wall brackets are not seismic certified. For Series J, include W option code for wall brackets to come with Series J transformers up to 75kVA or order separately for field installation. Call factory for price and availability.

⑤ May be used on "JST" suffix and "non JST" suffix transformers. Terminal lugs are screw type, lug connectors suitable for both copper and aluminum cable. All lugs are single barrel and suitable for cable ranges shown. 750kcmil lugs are capable of holding (2) 250kcmil cables in lieu of (1) 750kcmil cable. All lugs are rated 90°C.

⑥ Lug kits contain quantity required for each kVA based NEC ampacities for cable range indicated. For cable sizes outside the range, hole size of terminal may not be the correct size to mount other lugs. Bolt size in Hardware included column provides indication of hole size.

⑦ Primary and secondary terminal lugs are included on most ventilated transformers. (15kVA - 75kVA 3PH & 15kVA - 50kVA 1PH). Some 45 or 75kVA may not have secondary lugs depending on number and type of additional options. Call factory for confirmation.
